SCADAguardian from Nozomi Networks provides operational visibility and rapid detection of cyber threats and process risks – and does it in a completely passive way. SCADAguardian automatically discovers your entire industrial network, including assets, connections, protocols and topology. It monitors network communications and behavior for risks that threaten reliability and cybersecurity, and provides the information you need to respond quickly.

The RUGGEDCOM APE is a utility-grade computing platform that plugs directly into any member of the RUGGEDCOM RX1500 family to run third party software applications without the complications and inconveniences of procuring an external industrial PC.

Security information

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens’ products and solutions only form one element of such a concept.
