

# Improving Smart Building Security

Today's smart buildings contain a growing number of IoT and OT devices that must be identified, monitored and secured from cyberattacks.

To protect your smart buildings from cyber threats, risks and anomalies – while keeping occupants comfortable and safe – you need complete visibility of all your systems.

## Nozomi Networks brings you unparalleled OT and IoT expertise and is the only solution that provides:

- Security**  
 Get real-time, 365/7/24 monitoring, immediate breach and vulnerability alerts, and actionable insights for fast response.
- Visibility**  
 Get accurate, up-to-date information on all IoT and OT assets and networks, plus network visualization, all in one solution.
- Resilience**  
 Get advance warning of anomalies, failing OT and IoT devices, and network stability issues – so you can act before disruptions happen.

## Cybersecurity Benefits for Smart Buildings

### Facilities

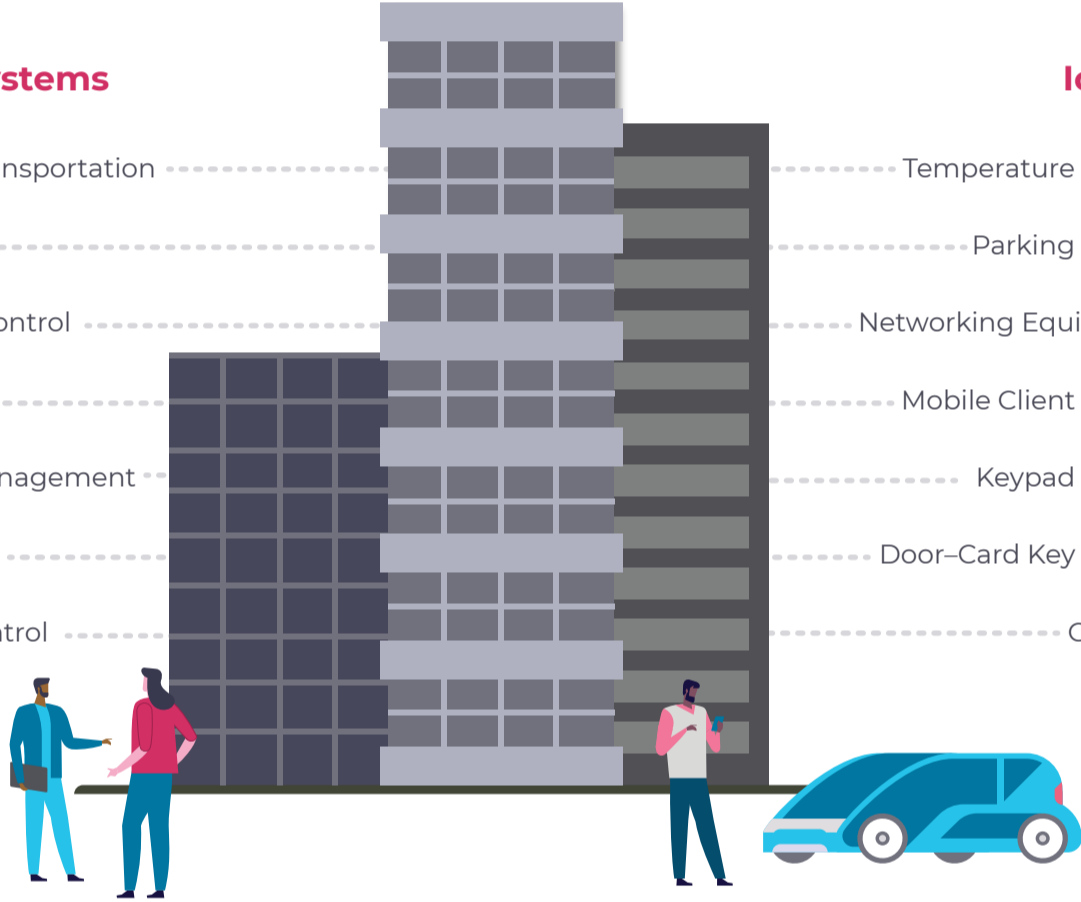

- Anticipate failing equipment or network stability issues and respond before incidents impact occupants
- Diagnose IoT/OT incidents faster and with fewer resources using insightful forensic tools
- Monitor diverse building systems and the activity of maintenance contactors for real-time awareness
- Future-proof your buildings with a scalable and flexible solution to handle new technologies, systems and facilities

### Building Systems

- Vertical Transportation
- Power
- Lighting Control
- HVAC
- Energy Management
- CCTV/NDR
- Access Control

### IoT Assets

- Temperature Sensor
- Parking Sensor
- Networking Equipment
- Mobile Client Device
- Keypad Access
- Door-Card Key Access
- Camera

- Identify, monitor and secure IoT/OT devices for improved risk mitigation and resilience
- Automate asset inventory and get clear identification of threats and risks for Zero Trust security
- See consolidated information from IoT/OT devices and systems via one monitoring tool
- Respond quickly to cyber threats with real-time breach alerts, actionable insights and playbooks

### IT

## With the unique combination of Guardian™ site-based sensors, Central Management Console™ (CMC) on-premises appliances or Vantage™ SaaS scalable solution, you can:

- Guardian**  
 See all your OT, IoT and IT assets and systems in one place  
 Save time and money by automating data collection  
 Detect threats and reduce response time
- CMC**  
 Single console view of building assets and networks  
 Multiply the benefits of individual sensors  
 Integrate with SIEMs and other IT/OT infrastructure
- Vantage**  
 See all facilities in a single pane of glass anytime, anywhere  
 Scaled security monitoring and visibility  
 Accelerate remediation with playbooks and action-based insights
