

Smart Cybersecurity for Airports

Today's diverse, complex airport subsystems are vulnerable to escalating cyber threats. With services already impacted by global shocks, airports can't afford further disruption to passenger and cargo service.

To protect your airport from cyber threats, risks, and anomalies, and meet cybersecurity standards, you need complete visibility of all your systems.

Nozomi Networks brings you unparalleled OT and IoT expertise and is the only solution that provides:

Risk Reduction

Get continuously updated and prioritized risk information + compliance with regulations and security best practices.

Visibility

Get accurate asset and network information for all monitored systems + network visualization for instant awareness – all in one solution.

Convergence

Get comprehensive and efficient security management through integration of operational data into SIEM, SOC and other systems.

Benefits for Airports:

Improved visibility into OT/IoT systems and their cybersecurity gaps.

Security for extremely diverse and complex operational environments.

Consolidated monitoring of airport operational networks into one solution.

Easy integration with SIEM, SOC and other systems.

Reduced security risk even with a constantly changing threat landscape.

Scalability to monitor complex systems with high numbers of nodes and network traffic.

Threat detection, actionable insights and prioritization to expedite response and reduce manpower needs.

With the unique combination of Guardian™ site-based sensors, Central Management Console™ (CMC) on-premises or Vantage™ SaaS scalable solution, you can:

Guardian

See all your OT, IoT and IT assets and systems in one place

Save time and money by automating data collection

Detect threats and reduce response time

CMC

Consolidate all airport assets and networks in a single view

Multiply the benefits of individual sensors

Integrate with SIEMs and other IT/OT infrastructure

Vantage

View airport subsystems anywhere, anytime in a single pane of glass

Scaled security monitoring and visibility

Accelerate remediation with custom playbooks
