Smart Cybersecurity for Smart Factories

Digital transformation is making manufacturing facilities more vulnerable to both cyber threats and operational downtime. To protect your facilities from cyber threats, risks and anomalies, you need complete visibility of all your systems.

Nozomi Networks brings you unparalleled OT expertise and is the only solution that provides:

**Risk Reduction**
- Get real-time 24/7/365 monitoring, immediate threat and failure alerts and actionable insights for fast response.

**Visibility**
- Get accurate information on all your OT, IoT and IT assets and protocols, including legacy equipment at brownfield sites. Improve situational awareness with a live network visualization and powerful query tool.

**Reliability**
- Detect signs of device or process malfunction, network instability or failing equipment. Fix problems before they cause downtime.

**IT Benefits:**
- Full visibility and risk exposure for all assets and networks at manufacturing sites
- Faster troubleshooting of OT incidents with forensic tools
- Information from all facilities via one monitoring tool

**OT Benefits:**
- A “no process risk” solution for comprehensive visibility of all systems and assets
- Identification and monitoring of previously unseen IoT devices
- One application that monitors all devices from all vendors
- Real-time monitoring and insight into production risks

With the unique combination of Guardian™ site-based sensors and Vantage™ SaaS scalable solution, you can:

**Guardian**
- See all your OT, IoT and IT assets and networks at each site
- Save time and money by automating data collection
- Reduce response time

**Vantage**
- Single pane of glass for anytime, anywhere view of global manufacturing assets and security risks
- Scale security monitoring and visibility for global manufacturers
- Reduce time to visibility by 90%
